

# SAMPLE

me

September 21, 2015

```
library(reticulate)
reticulate::use_python(python = "/opt/anaconda3/envs/ten2/bin/python", required = TRUE)
```

```
TMP<-"Blue"
TMP
```

```
## [1] "Blue"
```

You can insert the value of an object created with an R code chunk into text like this: The sky is Blue

```
pycode <-
'|
COLOR = "red"
print(COLOR)
'|
pyrtn <- py_to_r(py_run_string(code = pycode))
```

You cannot do the same thing with Python, or other types of code: The car is red
